

Introduction

From the month of February to May, I was attached at East Africa Data Centre (EADC), which is an affiliate company of Liquid Telecom as my private sector placement. This organization provides space for organization to store their servers for critical resources that should be always available. It achieves this by ensuring redundancy in power and housing many internet service providers (ISPs) in which the clients can easily connect to, thus ensuring redundancy also in their internet connectivity.

Activities Performed

- ❖ Network service Auditing
- ❖ Performing cross-connects to various ISPs
- ❖ Performing structured cabling and IP engineering
- ❖ Network device configuration and troubleshooting
- ❖ Performing server rescue
- ❖ Data auditing and system administration

Lessons Learned

- ❖ Design and enforcing best security practices
- ❖ Planning and prioritization of tasks, so as to be able to finish assigned task within the specified period
- ❖ Time management and people skills
- ❖ Server management

Supervisor
